

DIGITALPilot

DIGITALPilot(DPilot) is a next-generation aviation intelligence platform designed for pilots who demand precision, situational awareness, and instant access to critical aeronautical information.

Powered by professional-grade navigation data, DPilot transforms complex aviation datasets into an intuitive and interactive experience, helping pilots better understand airports, airspace, routes, and operational environments before and during every flight.

DPilot delivers the information you need through a clean, modern interface built specifically for aviation professionals.

ONE PLATFORM

Global Chart and Data Coverage

iOS
Apple devices

Android
Mobile use

Windows
Desktop acces

With its user-friendly interface and global data coverage, DPilot delivers a reliable and efficient digital experience, supporting users from pre-flight preparation to operational decision-making.

Key Highlights

- **One platform** for essential flight information
- **Global** chart and data coverage
- **Seamless cross-platform** EFB application
- Compatible with **iOS, Android, and Windows**
- **Reliable, up-to-date**, and **operationally ready** aviation data
- Designed for **pilots** and **flight operations teams**

DIGITALPilot Core Capabilities

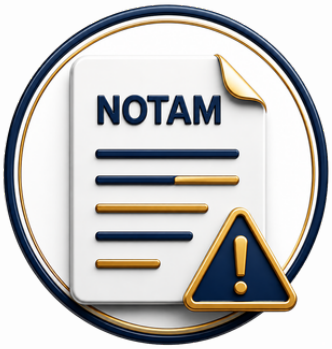

DPilot brings essential flight operation capabilities together in a single digital environment. From global coverage, weather and NOTAM access to flight charts, mission tracking, emergency support, flight planning and airport moving map functions, the platform is designed to support pilots and operators with reliable, accessible and mission-ready aviation information.

Key Features

- Interactive aviation map with advanced layer management
- Global airport database and search capabilities
- Airway network visualization and route awareness
- FIR and airspace boundary display
- High-quality aeronautical and navigation data
- Fast, intuitive, and pilot-focused user experience
- Optimized for flight preparation and operational awareness
- Designed for commercial, business, general aviation, and drone operations

Product Features

Global Aviation Data, Accessible Anytime

DPilot brings together the critical information needed for digital flight operations in one platform. From terminal charts and airport information to procedures and navigation data, the solution provides broad and practical access to essential aviation content.

Worldwide Terminal & Flight Charts
Provides access to terminal and flight charts with worldwide coverage.

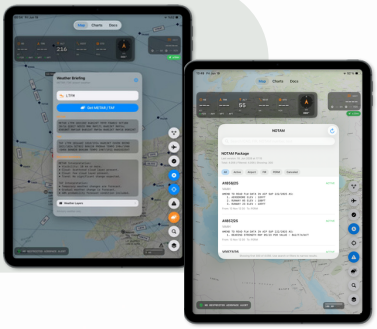

Airport Information
Offers airport-related data, runway details, and operational information in a single platform.

Procedures & Navigation Data
Enables digital access to SIDs, STARs, approach procedures, and navigation data.

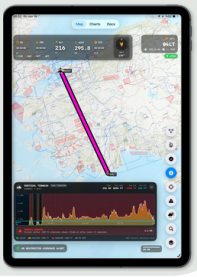

NOTAM & Weather Information
Supports operational awareness through access to NOTAMs, METARs, and TAFs.

User-Friendly Interface
Offers a practical, intuitive, and easy-to-use digital interface tailored to operational needs.

Cross-Platform Use
Ensures seamless use across multiple devices with support for iOS, Android, and Windows.

A practical EFB experience designed to help aviation professionals manage critical flight information with confidence and efficienc

Why DIGITALPilot?

Designed for confident digital flight operations

In digital flight operations, accurate, current, and accessible data is essential. DPilot is designed to enhance operational awareness and help make flight preparation and information management more efficient. Developed with KEYVAN Aviation's expertise in global aeronautical data and supported by certified data capabilities, DPilot combines reliable aviation data infrastructure with practical usability for aviation professionals.

Certified Data Expertise

KEYVAN Aviation is an EASA-approved Type 1 DAT Provider. The platform is backed by KEYVAN Aviation's strong know-how in aeronautical and navigation data.

Global Coverage

Built for broad operational coverage and international aviation needs

Operational Awareness

Supports access to essential information before and during operations.

Multi-Device Accessibility

A flexible EFB experience across mobile and desktop environments.

Fly smarter. Navigate with confidence. Experience aviation beyond the map.

DPilot brings certified aeronautical data, global chart coverage, and digital flight operation tools together in one platform — helping pilots and aviation professionals access reliable, accessible, and operationally ready information with confidence.
